Doxygen

Pieter P

These are instructions to build Doxygen from source.

doxygen.sh

```
5   cd /tmp
6   git clone --branch Release_1_8_18 --depth 1 https://github.com/doxygen/doxygen.git
7   mkdir doxygen/build && cd doxygen/build
8   cmake -G "Unix Makefiles" -DCMAKE_INSTALL_PREFIX=$HOME/.local ..
9   make -j`nproc`
10  make install
```

Make sure that `~/.local/bin` is in your `$PATH`.

You can download the shell script here: doxygen.sh

Tested on

- Ubuntu 16.04
- Ubuntu 18.04
- Ubuntu 19.10
- CentOS 7
